---

Summary

Senior engineer, 10+ years in software and cloud. Currently on the platform team at **Phoenix365**, running multi-region Kubernetes in production — 5 EKS clusters across 5 AWS accounts, 400+ microservices. Earlier, founding CTO at Oversecured, where a serverless-first architecture scaled the mobile-app vulnerability scanner to **5,000 paying clients at near-zero AWS spend**.

Highlights

- **Scale:** 5 EKS clusters · 5 AWS accounts · 400+ microservices
- **Zero-downtime migration:** moved 150 partner domains to a multi-tenant architecture; platform now runs 300+
- **Cost engineering:** grew Oversecured SaaS to 5,000 clients on serverless at near-zero AWS spend
- **Breadth:** 10+ years SE · 9+ years AWS · 8+ years hands-on cloud/DevOps (sole DevOps at Oversecured and KeyUA; AWS lead at Perfsys) · engineering-leadership and CTO experience

---

Skills

Containers & Orchestration — Kubernetes (EKS), Docker, Helm, Fargate, ECS
Infrastructure as Code — Pulumi (Python), AWS CDK, CloudFormation, Serverless Framework
CI/CD — GitHub Actions, AWS CodePipeline, GitLab CI
Observability — OpenTelemetry, Prometheus, VictoriaMetrics, Grafana, OpenSearch, ClickHouse — metrics, logs, distributed tracing
Edge & CDN — CloudFront, Cloudflare (caching, WAF, DDoS protection)
AWS — Lambda, S3, RDS, DynamoDB, IAM, VPC, Route 53, API Gateway, Step Functions, Secrets Manager
Languages — Python, Java, JavaScript / Node.js, Bash
Databases — PostgreSQL, ClickHouse, DynamoDB, Neo4j, MongoDB
Security & Auth — Keycloak, IAM policies, Secrets Manager, application security

---

Experience

Perfsys, Infosys, and KeyUA ran in parallel to Oversecured as consulting engagements during the founding-CTO period.

DevOps Engineer · Phoenix365 · 08.2024 — present
High-load global iGaming platform

- Operate 5 EKS clusters across 5 AWS accounts, supporting 400+ microservices
- Migrated **150 partner domains** to a multi-tenant architecture with **zero downtime** — coordinated DNS, edge (CloudFront/Cloudflare), TLS, and routing changes across the fleet; platform now runs 300+
- Designed and rolled out the observability stack from scratch — OTel collectors → Prometheus + VictoriaMetrics (metrics), OpenSearch (logs), ClickHouse (high-cardinality events), Grafana (dashboards) across all 400+ microservices
- Configure CloudFront and Cloudflare for global edge performance, caching, WAF and DDoS protection
- Codify cloud infrastructure with Pulumi (Python) — repeatable across accounts and regions

Stack: AWS, EKS, Docker, Pulumi (Python), OpenTelemetry, Prometheus, VictoriaMetrics, OpenSearch, ClickHouse, Grafana, GitHub Actions, Cloudflare

CTO / Lead Software Engineer / DevOps · Oversecured · 04.2018 — 07.2024
Mobile app vulnerability scanner (iOS + Android) — oversecured.com

- Founded and led engineering: scaled the platform from prototype to **5,000 paying clients** while keeping AWS spend at near-zero through a serverless-first architecture (Lambda + DynamoDB + S3 + Serverless Framework)
- Sole DevOps throughout — owned the full lifecycle: IaC (CloudFormation, Serverless Framework), CI/CD on GitHub, Keycloak SSO, monitoring
- Designed and built the scanner backend, public API, and customer-facing web app
- Hired and led a cross-functional team of engineers and security researchers

Stack: AWS (Lambda, DynamoDB, S3, API Gateway), Node.js, Java, Spring, Vue.js, PostgreSQL, Keycloak, Serverless Framework, Docker, GitHub

Software Engineer / Team Lead / DevOps · Perfsys · 03.2017 — 04.2020
medicalpayreview — healthcare billing reconciliation between patients, hospitals, insurers

- Designed **Neo4j as a graph middleware** between MySQL (relational) and MongoDB (document) — enabled flexible cross-store queries and relationship traversal not expressible in either store alone
- Java + Spring backend, ReactJS frontend, deployed on AWS + GCP (led the AWS side)
- Docker / docker-compose for local and CI environments

Earlier roles

- **Lead SE / Head of Engineering · KeyUA · 11.2021 — 02.2022** — bootstrapped a service-outsourcing engineering team in 3 months: hired and onboarded 8 engineers, ran internal AWS Serverless training program (sole DevOps)
- **Senior Python Engineer · Infosys · 08.2020 — 11.2021** — built a serverless API + real-time dashboard for an automated-test monitoring platform (AWS Serverless, Python, DynamoDB)
- **Java Developer · PrivatBank · 03.2016 — 03.2017** — modernized the PartPayment portal stack and led a redesign (Java 7/8, Spring 3/4, Hibernate, PostgreSQL)

Education

- **2022 — 2023** · Master of Information Technology (Computer Sciences)
- **2014 — 2015** · Java Development Course
- **2003 — 2008** · Master of Civil & Industrial Engineering

Languages

- **English** — Professional working proficiency
- **Ukrainian, Russian** — Native
- **Polish** — Conversational (A2 → B1 in progress)
